# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

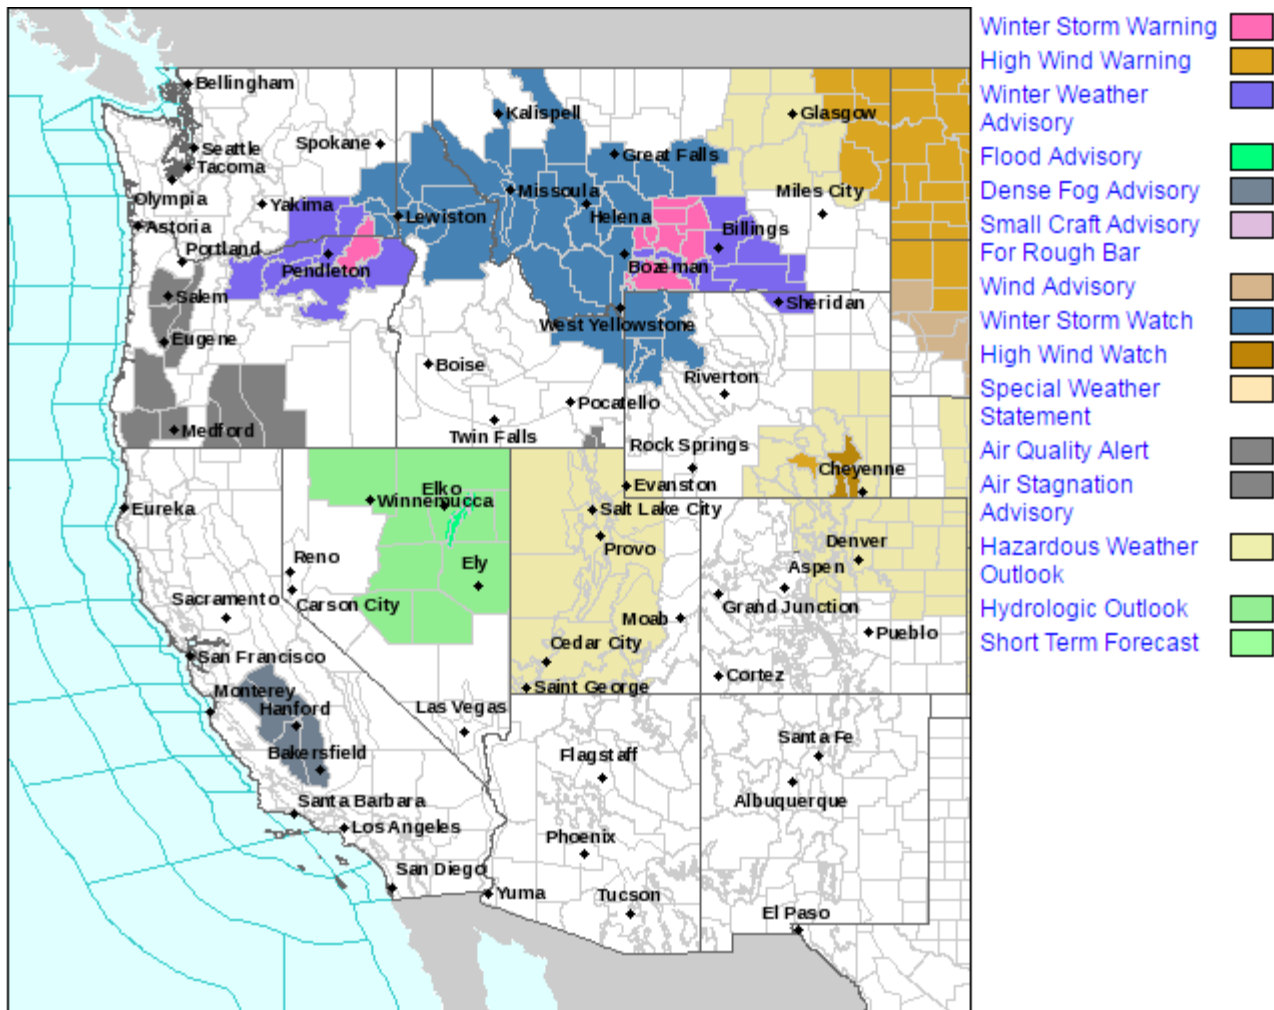

High pressure will continue to keep the region dry through Tuesday. Today and Tuesday will be the warmest days over the next week with above normal highs. The warmest inland areas will be in the lower 60s. After almost a week of dry weather, another strong weather system will be moving into the region the middle of this week. Precipitation is expected to start in earnest Wednesday night and finally turn to showers and taper off late Friday. Snow levels with this system will generally be around 5000 feet, so mountain travel will become challenging again. Gusty southerly winds will start in Wednesday afternoon with gusts 30-50 mph pretty common at the higher elevations. Winds at lower elevations are not expected to be quite as strong, mostly up to around 15 mph sustained and gusts to 20 mph in the windiest locations Wednesday and Thursday. The strong, gusty winds will probably continue well into Friday. Higher pressure returns for the weekend with drier weather, although there may continue to be a chance of showers in the northern areas Saturday and Sunday.

## **SOUTHERN CALIFORNIA**

A strong ridge of high pressure over California will continue to bring well above normal temperatures and very low humidity away from the San Joaquin Valley and coast through Tuesday. Temperatures will be around 10 degrees above normal today, with mid 50s to mid 60s across the mountains and 70s to low 80s in the valleys. Temperatures will cool a few degrees across the coast and coastal valleys Tuesday as the ridge begins to weaken, but there will be little change in temperature across the mountains and deserts. Minimum humidity will be mainly in the single digits and teens away from the Central Valley and coast through Tuesday. Local northeast to east winds of 10 to 20 mph with gusts to 35 mph will surface across the mountains and below the canyons and passes of Southern California this morning. A Pacific trough will approach the West Coast and move inland Wednesday through Friday bringing significant cooling to the region. This trough will also bring showers to Central California starting Wednesday evening and to Southern California starting Thursday evening. Most foothill and mountain locations across Central California will receive between 1 and 4 inches of rainfall, while the coast and valley locations of Central California receive between a quarter inch and an inch of rainfall. Most of Southern California will receive less than a quarter inch of rainfall. The snow level will mainly be between 7,000 and 8,000 feet. South to west winds of 15 to 25 mph with gusts to 40 mph will surface across the wind prone mountain and desert areas Wednesday afternoon through Friday evening. A weak ridge of high pressure will build into California from the Pacific Ocean bringing a slow warming and drying trend this weekend.
